

Verif-Eye - Container Quality Reviews

Automatically detect damaged residential containers without manual driver/helper interaction.

Protect your image and improve equipment functionality with **Automated Container Quality Reviews.**

Let drivers drive. We'll handle the rest.

The Challenges

With thousands of carts deployed in the communities you serve, keeping up with container quality standards can be a tall task. Damaged, defaced or otherwise substandard carts can be a safety liability, causing undeserved reputational harm, and even disrupting the flow of collection operations. With your organization's name clearly identified on each cart, current and potential customers make judgements about your service based solely on the state of your containers. It's not fair but it is reality! Reputation aside, damaged carts can lead to functional and safety concerns as well. The waste and recycling collection environment is tough on containers. Broken or missing wheels on roll out carts, damaged lids, cracked plastic and other structural issues can affect the safety of both your employees and your customers. These same issues can potentially cause spillage and slow down, or prevent collection all together. Relying on your customers to report container quality issues will capture only a fraction of the problems. Asking your employees to identify and document these issues takes them away from their primary objective. 3rd Eye® digital's Verif-Eye® Residential Container Quality review module can automate this process for you!

The Solution

Maintaining the safety and functionality of residential carts is an operational priority. Additionally, your logo displayed on containers at the curb for collection is often the most effective marketing tool. Ensuring the quality of your deployed container inventory reduces risk, drives a more efficient collection process, and promotes a positive company image in the communities you serve. Verif-Eye by 3rd Eye offers residential container quality review to help you pinpoint carts that need to be repaired or replaced. Each collection event or exception is automatically documented with geolocated photo and video evidence and reviewed by 3rd Eye to identify damaged, defaced, or otherwise substandard carts. Our industry-leading customer association will match each container to one of your customers, and your team can quickly schedule repair or replacement. Automating your container review process keeps your drivers and helpers focused on safety and service. Staying one step ahead of your customers improves customer satisfaction. Prioritize your company image, employee and customer safety, and operational efficiency with Verif-Eye residential container quality review by 3rd Eye.

Value Overview

- Improve Public Perception
- Limit Liability
- Increase Productivity
- Reduce Driver Interaction
- Improve Customer Satisfaction
